SAFETY PRECAUTIONS:
Do not operate the equipment before studying the instruction manual and the accompanying safety precautions. Make sure that Lupo Safety Instruction is always included with the equipment! Lupo products are intended for professional use. Do not place or use the equipment where it can be exposed to moisture, extreme electromagnetic fields or in areas with flammable gases or dust! Do not expose the equipment to dripping or splashing. Do not place any objects filled with liquids on or near the equipment. Do not expose the equipment to hasty temperature changes in humid conditions as this could lead to condensation water in the unit. Equipment must only be serviced, modified or repaired by authorized and competent service personnel!

CAUTION - BURN HAZARD - HOT PARTS
Do not touch hot parts with bare fingers! LED bulbs and certain metal parts emit strong heat when used! Do not point lamps too close to persons. Always use the fixtures with the front part closed.

NOTICE - EQUIPMENT OVERHEATING RISK
Do not obstruct ventilation by placing filters, diffusing materials, etc. over inlets and outlets of the equipment ventilation or directly over glass cover or LED bulbs.

FINAL DISPOSAL
When no longer in use, this product may not be deposited in the normal household waste but should be brought to a collection point for the recycling of electrical and electronic appliances. The materials are recyclable as marked. By re-use, recycling or another form of usign old appliances you are making an important contribution towards the protection of the environment. Please ask your local authorities for the appropriate disposal point. Equipment contains electrical and electronic components that could be harmful to the environment.
Equipment may be returned to Lupo distributors free of charge for recycling according to WEEE.
Follow local legal requirements for separate disposal of waste, for instance WEEE directive for electrical and electronic equipment on the European market, when product life has ended!

MAINTENANCE AND CARE
Please do not forget that the safe operation of lampheads also includes their maintenance and care. A visual inspection should be conducted before every use and an inspection of electrical safety should be conducted at least once every 12 months.

WARRANTY
Each Lupo product will be repaired free of charge by Lupo if during a period of **12 months** for mechanical components and **12 months** for electrical/electronic components from date of purchase its working order is impaired through a manufacturing or material defect. The faulty product should be immediately sent to authorized dealer or Lupo. This warranty is not valid for equipment which has been used improperly, dismantled, modified or repaired by persons not belonging to the Lupo distribution network. It does not cover lamps, lenses or the material entirely or partially made of glass. No responsibilities can be accepted for damage resulting from unsatisfactory operation of the equipment. Please contact the dealer who sold the fixture/s before any units are returned for repair. Lupo will make the final determination as to whether or not the unit is covered by warranty. Lupo will replace or repair to proper working condition any products that are returned under waranty. Products repaired or replaced under warranty are under warranty only for the remaining unexpired period of time of the original warranty. Any product unit or part returned to Lupo must be packaged in a suitable manner to ensure the protection of such product unit or parts. The package must be clearly an prominently marked to indicate that the package contains returned product units or parts. All returned product units or parts must be accompanied by a written explanation of the alleged problem or malfunction.

⚠ WARNING:
When hanging the fixture from higher position, please make sure you use a safety cable to attach the barndoors to the yoke of the fresnel.
Barndoors should always be secured to the yoke when used in this way.
Another safety cable should be used to secure the fixture to the mounting pipe or truss.
Both safety cables must be properly dimensioned for the fixture and the application when the fixture is operated in hanging position please ensure that the accessories are installed correctly with top latch locked.

*Thanks for having purchased **Lupo** products. All the products are made in Italy and all the efforts have been put to keep the quality standards high. We hope this product can help you in your job and make your life easier as a professional. We also hope you will enjoy its use and we would be happy to receive your feedback about it.*

DMX Protocol

Introduction

The SuperpanelPRO and UltrapanelPRO can be used with 8 bit or 16 bit DMX control. (See *DMX OPERATION - advanced settings* in the user's manual). When used in **8 bit mode** the panels uses ***one channel for each function***. DMX values for each channel are in the range of 0 to 255. When used in 1**6 bit mode** the panels uses ***two channels for each function***. The increased resolution offers a smooth dimming and a more accurate color adjustment. DMX values for the first channel (byte 1) are in the range of 256 to 65535 while for the second channel (byte 2) they are in the range of 0 to 255.

⚠ **ATTENTION:** The symbol **- ! -** on the display indicates that there is **no DMX signal.**

⚠ **ATTENTION: *** If the **STROBE** in the DMX ADVANCED SETTINGS is enabled, there are 1 more channel in 8 bit and 2 more channels in 16 bit:

DMX Channel Protocol - 8 bit

DMX Protocol

Introduction

The SuperpanelPRO and UltrapanelPRO can be used with 8 bit or 16 bit DMX control. (See *DMX OPERATION - advanced settings* in the user's manual). When used in **8 bit mode** the panels uses ***one channel for each function***. DMX values for each channel are in the range of 0 to 255. When used in 1**6 bit mode** the panels uses ***two channels for each function***. The increased resolution offers a smooth dimming and a more accurate color adjustment. DMX values for the first channel (byte 1) are in the range of 256 to 65535 while for the second channel (byte 2) they are in the range of 0 to 255.

⚠ **ATTENTION:** The symbol **- ! -** on the display indicates that there is **no DMX signal.**

DMX Protocol

Introduction

The SuperpanelPRO and UltrapanelPRO can be used with 8 bit or 16 bit DMX control.
(See *DMX OPERATION - advanced settings* in the user's manual).

When used in **8 bit mode** the panels uses ***one channel for each function***. DMX values for each channel are in the range of 0 to 255.

When used in 1**6 bit mode** the panels uses ***two channels for each function***. The increased resolution offers a smooth dimming and a more accurate color adjustment. DMX values for the first channel (byte 1) are in the range of 256 to 65535 while for the second channel (byte 2) they are in the range of 0 to 255.

⚠ ATTENTION: The symbol **- ! -** on the display indicates that there is **no DMX signal.**

⚠ ATTENTION: * If the **STROBE** in the DMX ADVANCED SETTINGS is enabled, there are 1 more channel in 8 bit and 2 more channels in 16 bit:

DMX OPERATION - DMX protocol

The SuperpanelPRO and the UltrapanelPRO can be used with **8 bit** (1 channel per function) and **16 bit** (2 channels per function). The SuperpanelPRO and the UltrapanelPRO uses consecutive channels starting from the DMX address set on the panel used as reference for the connection to the control desk. Please take the above into consideration when using many units of SuperpanelPRO and the UltrapanelPRO to avoid overlaps.

⚠ **ATTENTION: *** If the **STROBE** in the DMX ADVANCED SETTINGS is enabled, there are 1 more channel in 8 bit and 2 more channels in 16 bit:

DMX Channel Protocol - 8 bit

MODE	CHANNELS	DMX CHANNEL POSITION	DMX VALUE	VALUE
CCT	2	1. DIMMER	0 - 255	0 - 100 %
		2. COLOR TEMPERATURE	0 - 255	6500 - 2700

DMX Channel Protocol - 16 bit

MODE	CHANNELS	DMX CHANNEL POSITION	DMX VALUE	VALUE
CCT	4	1. DIMMER - byte 1	0 - 65535	0 ÷ 100 %
		2. DIMMER - byte 2		
		3. COLOR TEMPERATURE - byte 1	0 - 65535	6500 - 2700
		4. COLOR TEMPERATURE - byte 2

Use USB port for firmware updates.

Update the Firmware

1. Copy the file on an USB Pendrive (FAT32 formatted) in the main root;
2. Switch off the equipment and insert the USB Pendrive;
3. Switch on the equipment;
4. Wait until display backlight flashes (it takes several minutes and red led must toggle for all time long);
5. Switch off the equipment;
6. Extract the Pendrive and switch on the equipment: the firmware is updated.

DMX Protocol

Introduction

The SuperpanelPRO and UltrapanelPRO can be used with 8 bit or 16 bit DMX control.
(See *DMX OPERATION - advanced settings* in the user's manual).

When used in **8 bit mode** the panels uses ***one channel for each function***. DMX values for each channel are in the range of 0 to 255.

When used in 1**6 bit mode** the panels uses ***two channels for each function***. The increased resolution offers a smooth dimming and a more accurate color adjustment. DMX values for the first channel (byte 1) are in the range of 256 to 65535 while for the second channel (byte 2) they are in the range of 0 to 255.

⚠ **ATTENTION:** The symbol **- ! -** on the display indicates that there is **no DMX signal.**

⚠ **ATTENTION: *** If the **STROBE** in the DMX ADVANCED SETTINGS is enabled, there are 1 more channel in 8 bit and 2 more channels in 16 bit:

DMX OPERATION - DMX protocol

The SuperpanelPRO and the UltrapanelPRO can be used with **8 bit** (1 channel per function) and **16 bit** (2 channels per function). The SuperpanelPRO and the UltrapanelPRO uses consecutive channels starting from the DMX address set on the panel used as reference for the connection to the control desk. Please take the above into consideration when using many units of SuperpanelPRO and the UltrapanelPRO to avoid overlaps.

⚠ **ATTENTION: *** If the **STROBE** in the DMX ADVANCED SETTINGS is enabled, there are 1 more channel in 8 bit and 2 more channels in 16 bit:

DMX Protocol

Introduction

The Actionpanel Full Color, the Superpanel 30 Full Color and the Superpanel 60 Full color can be used with 8 bit or 16 bit DMX control.
(See *DMX OPERATION - advanced settings* in the user's manual).

When used in **8 bit mode** the panels uses ***one channel for each function***. DMX values for each channel are in the range of 0 to 255. When used in 1**6 bit mode** the panels uses ***two channels for each function***. The increased resolution offers a smooth dimming and a more accurate color adjustment. DMX values for the first channel (byte 1) are in the range of 256 to 65535 while for the second channel (byte 2) they are in the range of 0 to 255.

⚠ **ATTENTION:** The symbol **- ! -** on the display indicates that there is **no DMX signal.**

DMX Protocol

Introduction

The SuperpanelPRO and UltrapanelPRO can be used with 8 bit or 16 bit DMX control. (See *DMX OPERATION - advanced settings* in the user's manual). When used in **8 bit mode** the panels uses ***one channel for each function***. DMX values for each channel are in the range of 0 to 255. When used in 1**6 bit mode** the panels uses ***two channels for each function***. The increased resolution offers a smooth dimming and a more accurate color adjustment. DMX values for the first channel (byte 1) are in the range of 256 to 65535 while for the second channel (byte 2) they are in the range of 0 to 255.

⚠ **ATTENTION:** The symbol **- ! -** on the display indicates that there is **no DMX signal.**

⚠ **ATTENTION: *** If the **STROBE** in the DMX ADVANCED SETTINGS is enabled, there are 1 more channel in 8 bit and 2 more channels in 16 bit:

DMX Channel Protocol - 8 bit

DMX Protocol

Introduction

The SuperpanelPRO and UltrapanelPRO can be used with 8 bit or 16 bit DMX control. (See *DMX OPERATION - advanced settings* in the user's manual). When used in **8 bit mode** the panels uses ***one channel for each function***. DMX values for each channel are in the range of 0 to 255. When used in 1**6 bit mode** the panels uses ***two channels for each function***. The increased resolution offers a smooth dimming and a more accurate color adjustment. DMX values for the first channel (byte 1) are in the range of 256 to 65535 while for the second channel (byte 2) they are in the range of 0 to 255.

⚠ **ATTENTION:** The symbol **- ! -** on the display indicates that there is **no DMX signal.**

⚠ **ATTENTION: *** If the **STROBE** in the DMX ADVANCED SETTINGS is enabled, there are 1 more channel in 8 bit and 2 more channels in 16 bit:

DMX Protocol

Introduction

The SuperpanelPRO and UltrapanelPRO can be used with 8 bit or 16 bit DMX control. (See *DMX OPERATION - advanced settings* in the user's manual). When used in **8 bit mode** the panels uses ***one channel for each function***. DMX values for each channel are in the range of 0 to 255. When used in 1**6 bit mode** the panels uses ***two channels for each function***. The increased resolution offers a smooth dimming and a more accurate color adjustment. DMX values for the first channel (byte 1) are in the range of 256 to 65535 while for the second channel (byte 2) they are in the range of 0 to 255.

> ⚠ **ATTENTION:** The symbol **- ! -** on the display indicates that there is **no DMX signal.**

> ⚠ **ATTENTION: *** If the **STROBE** in the DMX ADVANCED SETTINGS is enabled, there are 1 more channel in 8 bit and 2 more channels in 16 bit:

CCT MODE: Warm and cold white control mode. It allows you to adjust colour temperature (CCT), green/magenta compensation (GN) and light intensity. *This is the default setting.*

1. In MODE menu select ***EFFECT MODE***.
2. Select the EFFECT to be activated with rotate the ❷ button, confirm the selection by pressing the ❷ push button.
3. Use the knob ❷ to change the DIMMER and the knob ❶ to adjust the effect setting values.

> ⚠ **ATTENTION**: Rotating the ❶ knob changes the CT value- Pressing ❶ button select GN value that can be changed by rotating the same ❶ knob.

DMX OPERATION

1. Press the ❷ push button to enter the main MENU.
2. Select ***CONTROL*** with the ❷ knob and press the ❷ push button to confirm selection.
3. Select ***DMX*** with the ❷ knob and press the ❷ push button to confirm selection.
4. Select the DMX channel, rotating the ❶ knob to change DMX ADDRESS in ascending or descending order among 1 and 512. The number shown on the display ❸ is the selected channel to communicate with the control desk.
5. See ***DMX PROTOCOL MANUAL*** for DMX channel specification.

> **NOTE:** The symbol **- ! -** on the display indicates that there is **no DMX signal.**

BLUETOOTH

1. Press the ❷ push button to enter the main MENU.
1. Select ***CONTROL*** with the ❷ knob and press the ❷ push button to confirm selection.
2. Select ***BLE*** with the ❷ knob and press the ❷ push button to confirm selection.

DMX OPERATION - Advanced Settings

1. Press the ❷ push button to enter the main MENU.
2. Navigate through the main MENU with the ❷ knob until **DEVICE SETTINGS** and press the ❷ push button to confirm selection.
3. Rotate the ❷ knob to select ***DMX ADVANCED,*** press the ❷ push button to confirm selection.
4. Select one of the options among the ***DMX BIT***, ***DMX SIGNAL LOSS, RDM ENABLE, STROBE ENABLE*** and ***INV CCT*** press ❷ push button to confirm the selection.

DMX BIT:

Resolution of the DMX control. 8bit 1 channel per function and 16 bit 2 channels per function.

1. Select the ***DMX BIT*** item by pressing the ❷ push button.
2. Rotate the ❷ knob to choose between ***8bit / 16bit***, press the ❷ push button to confirm the selected setting. *See **DMX PROTOCOL MANUAL**.*

DMX SIGNAL LOSS:

This feature allows to choose the device's behaviour in case of a DMX signal loss.

1. Select the ***LOSS DMX SIGNAL*** item with the ❷ push button
2. Rotate the ❷ knob to select the device's behaviour among ***BLACK OUT /SETTINGS LAST / SETTINGS 1min***, press the ❷ push button to confirm the setting.

Black out: The device switches off.

Settings Last: The values of the last selected setting are maintained over time until the device is switched off.

Settings 1min: The values of the last selected settings is maintained for one minute and then the device switch off.

RDM Enable: ON/OFF, enable/disable RDM Protocol

INV CCT: ON/FF: enable/disable reversal CCT console control

DMX Protocol

Introduction

The Actionpanel Full Color, the Superpanel 30 Full Color and the Superpanel 60 Full color can be used with 8 bit or 16 bit DMX control.
(See *DMX OPERATION - advanced settings* in the user's manual).

When used in **8 bit mode** the panels uses ***one channel for each function***. DMX values for each channel are in the range of 0 to 255. When used in 1**6 bit mode** the panels uses ***two channels for each function***. The increased resolution offers a smooth dimming and a more accurate color adjustment. DMX values for the first channel (byte 1) are in the range of 256 to 65535 while for the second channel (byte 2) they are in the range of 0 to 255.

> ⚠ **ATTENTION:** The symbol **- ! -** on the display indicates that there is **no DMX signal.**

BLUETOOTH

1. Press the ❷ push button to enter the main MENU.
2. Navigate through the MENU rotating the ❷ button, select ***DEVICE SETTINGS***, press the ❷ push button to confirm the selection.
3. Navigate through the MENU rotating the ❷ button, select ***GENERAL***, press the ❷ push button to confirm the selection.
4. Navigate through the ***FAN POWER / DISPLAY / FREQUENCY / FILTER / LINEARIZATION / CCT LIMIT*** functions, rotating the ❷ button to select the desired function and press the ❷ push button to confirm the selection.
5. Within each function select the option to be activated and rotate the ❷ button.

Fan Power: Fan operation ***ON / OFF.***

When the fan is **OFF** the ***light intensity*** be adjustable between **0 and 50%.**

Display: Time during which the display backlight stays on. ***30sec / 1min / ALWAYS ON***.

Frequency: Dimmer frequency 18 KHz - 25 KHz

Filter: It is the speed response of the system (smooth factor).

FULL SPEED / NORMAL SPEED / HIGH SPEED / LOW SPEED.

Linearization: Linearization is the compensation curve for the human eye's perception of the luminous intensity emitted as a function of the required power. Required power = dimmer value on the display. ***LINEAR / EXPONENTIAL / LOGARITHMIC***.

Linear: No compensation, the intensity of the light is directly proportional to requested power.

Exponential: The light intensity increases from 0 to 100 exponentially.

Logarithmic: The light intensity increases from 0 to 100 logarithmically.
CCT Limit: CCT range 2800 - 6500 or 3200 - 5600

RESET DEVICE

1. Press the « **OK** » ❷ button to enter the main MENU.
2. Select ***RESET DEVICE*** rotating the ❷ button, press the ❷ push button to confirm the selection.
3. Select ***YES*** rotating the ❷ button, press the ❷ push button to confirm the selection.

USB port

Use USB port for firmware updates.

Update the Firmware

1. Copy the file on an USB Pendrive (FAT32 formatted) in the main root;
2. Switch off the equipment and insert the USB Pendrive;
3. Switch on the equipment;

4. Wait until display backlight flashes (it takes several minutes and red led must toggle for all time long);
5. Switch off the equipment;
6. Extract the Pendrive and switch on the equipment: the firmware is updated.
