CREATIVE LIGHTING SOLUTIONS

Immerse your audience in a spectacular experience

The power of show lighting combined with special effects has the ability to amplify the mood and accentuate the highlights within the story of any event. If you want to leave a lasting impression on your audience there is no way around incorporating these mesmerising elements.

We offer a wide range of solutions for creating different effects such as smoke, bubbles, snow, confetti and CO₂. Each effect can be used in different ways to achieve your desired result. For example, fog can be created using fazers and hazers to enhance the visibility of light beams, block out certain areas or attract attention with large, smoke-filled bubbles. You can even create mystical or romantic atmospheres with low fog machines, or simulate CO₂ effects with upward blowing smoke machines for a dramatic experience. In addition, our special FX

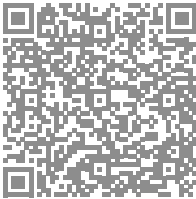

consumables include scented additives that allow you to add a scent to your smoke for an even more immersive experience.

When it comes to special effects, reliability, durability and safety are paramount. That's why we offer a range of devices that are perfectly capable of conveying your intentions, while ensuring the utmost in safety and durability. Our selection is suitable for both professional and consumer use, making it ideal for a wide range of applications. From fog and confetti machines to fans and consumables, we have everything you need to elevate your event to new heights.

Discover the endless possibilities our special effects products can bring to your creative vision. Prepare to amaze and inspire your audience with unforgettable experiences.
